The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/799,866

Applicant(s)

FUKUDA ET AL.

Examiner

Nafiz E. Hoque

Art Unit

2614

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 July 2010.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 36-43 and 101 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 36-43 and 101 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☒ Claim(s) 44-100 and 102-106 are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/06)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Response to Amendment

1. Applicant's arguments filed on July 28, 2010 have been entered. Claims 36 and 101 have been amended. No claims have been added or cancelled. Claims 36-43 and 101 are still pending in this application, with claims 36 and 101 being independent.

Response to Arguments

2. Applicant's arguments with respect to claim 36-43 and 101 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 36, 41-43 and 101 are rejected under 35 U.S.C. 103(a) as being unpatentable over Farfan et al. (US 5,875,231) in view of Miloslavsky (US 5,915,012).

Regarding claims 36 and 101, Farfan discloses a computer telephony integration client unit (fig. 13, element 1303) for transmitting computer telephony integration control request information for use in requesting computer telephony integration control to a computer telephony integration server unit (fig. 13, element 1302), comprising:

computer telephony integration control request information editing means for editing the computer telephony integration control request information (col. 7, lines 2-16); and

communications control means for communicating with the computer telephony integration server unit through a computer network the computer telephony integration control request information and information relating to the computer telephony integration control request information (fig. 13 – shows communicating with a server in a LAN).

Farfan does not explicitly disclose wherein the control disclose request information for controlling communications, through a communications network, between a first telephony device associated with the computer telephony integration client unit and a second telephony device associated with the computer telephony integration server unit.

Miloslavsky discloses wherein the control disclose request information for controlling communications (col. 3, lines 38-65), through a communications network (see fig. 1, el. 136), between a first telephony device associated with the computer telephony integration client unit and a second telephony device associated with the computer telephony integration server unit (see fig. 1, elements 141, 142).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Farfan in view of Miloslavsky to route combinations of voice and digital data to desired places (col. 3, lines 45-46).

Regarding claim 41, Farfan discloses wherein a source terminal unit and a destination terminal unit communicate with each other through an exchange unit and a switching network to which the exchange unit is connected (fig. 1, elements 101 and 102).

Regarding claim 42, Farfan discloses wherein a source terminal unit and a destination terminal unit are connected to an exchange unit and communicate with each other through an extension network controlled by the exchange unit (fig. 13, element 1301).

Regarding claim 43, Farfan discloses an exchange unit used in the computer telephony integration control system according to claim 36 (fig. 13, element 1301).

5. Claim 37 is rejected under 35 U.S.C. 103(a) as being unpatentable over Farfan et al. (US 5,875,231) in view of Miloslavsky (US 5,915,012) and in further view of Iida et al. (US 5,577,111).

Regarding claim 37, Farfan discloses computer telephony integration (see fig. 13).

Farfan and Miloslavsky does not disclose wherein said computer telephony integration control request information contains information specifying issue/non-issue of a result notification and information specifying a monitor time; and when information specifying issue of the result notification is set in the computer telephony integration control request information, said computer telephony integration server unit returns a notification as to whether or not the computer telephony integration control has been

successfully performed within the monitor time set in the computer telephony integration control request information.

lida discloses wherein said computer telephony integration control request information contains information specifying issue/non-issue of a result notification and information specifying a monitor time; and when information specifying issue of the result notification is set in the computer telephony integration control request information, said computer telephony integration server unit returns a notification as to whether or not the computer telephony integration control has been successfully performed within the monitor time set in the computer telephony integration control request information (col. 9, lines 20-34; fig. 7).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Farfan and Miloslavsky in view of lida to set a time for the request and cancel the camp-on request if it is not answered within a certain period to avoid having a request that is infinitely long (lida, col. 9, lines 20-34).

6. Claims 38-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Farfan et al. (US 5,875,231) in view of Miloslavsky (US 5,915,012) and in further view of Farris (US 5,692,033).

Regarding claim 38, Farfan discloses a source terminal unit capable of calling a call from the exchange unit to a destination terminal unit (see figs. 1, 13).

Farfan and Miloslavsky do not disclose wherein said computer telephony integration control refers to two-point connection control to connect a source terminal unit capable of releasing a call from the exchange unit to a destination terminal unit.

Farris discloses wherein said computer telephony integration control refers to two-point connection control to connect a source terminal unit capable of releasing a call from the exchange unit to a destination terminal unit (col. 3, lines 29-52).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Farfan and Miloslavsky in view of Farris to automatically connect the call when the line is available (Farris, col. 3, lines 31-37).

Regarding claim 39, Farris discloses wherein said two-point connection control is periodically performed until the destination terminal unit answers (col. 3, lines 45-52).

Regarding claim 40, Farris discloses wherein said two-point connection control is performed upon receipt of a call release notification indicating that the destination terminal unit is ready (col. 2, lines 13-16).

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nafiz E. Hoque whose telephone number is (571) 270-1811. The examiner can normally be reached on M-F Alternate Fridays Off 7:30 - 5:00 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ahmad Matar can be reached on 571-272-7488. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
